

Jaksta Feature Sheet

Version 1.1

May 2011

Jaksta is a full-featured video and music downloader for the Mac.

How it works. Jaksta operates down at the networking layer of the users Mac, listening to everything that comes into the computer. When video or music are detected, Jaksta takes over and downloads a copy of it's own.

This approach means that Jaksta works for any browser and indeed any application that downloads video or music from the web. This approach also makes Jaksta the most reliable and efficient downloader on the market.

Simple to Use. There is nothing to set up for Jaksta. Just switch it on and it will do the rest. Jaksta comes with a bunch of common conversion presets that allow it to convert easily for iPhone, iPad, AppleTV, etc.

100,000+ Sites. Jaksta will download from almost any non copy-protected site on the web. When customers report sites that don't work we add in support for that site.

MP3 Support. Jaksta includes a music naming service so that your music downloads are named correctly before being added to iTunes, or any music manager.

Supports all common streaming formats. Jaksta supports a host of video and music streaming protocols so that the user can be confident that Jaksta will work for any site they visit.

Lightning Fast. Since Jaksta works outside of the users browser, it can do fancy things to download super fast. For example, for sites like YouTube, Jaksta downloads using up to 20 parallel streams, pulling down video in as little as 1/20th of the video duration.

Concurrent Downloads. Jaksta will download as many videos at once as you can browse to. This could be 10 videos from one site, or from 10 different sites. Jaksta will download everything concurrently then convert the downloads one by one.

iTunes Friendly. Jaksta is integrated with iTunes so that the user can automatically have their video or music downloads add straight into iTunes.

Pricing

Jaksta for Mac is priced at \$US 49.99.

Jaksta for Mac is available from shedworx.com

Jaksta for Mac is also sold under jaksta.com. Shedworx is the developer and owner of Jaksta for Mac.

System Requirements

Jaksta for Mac runs on OSX 10.5 and 10.6 on Intel only. OSX 10.6 is our preferred platform.
