

Music Converter Pro & Music Converter Feature Sheet

Version 1.0
November 2011

Music Converter and Music Converter Pro are full-featured music and audio converters for the Mac. Both applications share the same conversion engine while Pro includes custom conversion settings and batch conversions.

Simple to Use. There is nothing to set up for Music Converter. Just drag video or music files onto it, select the output format and click Convert. We have deliberately omitted output setting controls for the common conversions. Instead, we just ask the user what general format they want to convert to and we pick the best settings.

Format Support. Music Converter can convert to and from many audio formats. We use FFmpeg and Apple's Core Audio API to handle all popular formats.

Video. Music Converter can also extract audio from video files. This is especially useful when you need to take the music track from something like a music video.

iTunes Support. Music Converter sends completed conversions to iTunes. From here the user just syncs their device and they have their music ready to go.

Ringtones. Music tracks can easily be converted to a ringtone which Music Converter then adds to iTunes as a ringtone. These ringtones can then be easily associated with contacts on the iPhone.

Metadata Editing. Album, Artist and Track name can be edited in the app. This data is used to name the converted file and is also added to the file's metadata.

Pro Features

Batch Conversions. Music Converter Pro can process batches of audio files including Albums. You can drag full folders of files onto the app and it will organise the files into Albums.

Advanced Custom Settings. An easy to use interface is available for the management of custom conversion settings. Bit rate, audio format, sample rate and channels can be specified for any number of custom-named settings.

Pricing

Music Converter and music Converter Pro are available on the Mac App Store and shedworx.com.

Music Converter is free and Music Converter Pro is \$4.99US.

System Requirements

Music Converter runs on OSX 10.6 (Snow Leopard) and 10.7 (Lion).

More Information

We are more than happy to answer any questions you might have about our products, or even about general video and digital asset management areas.
