

# VoltaicHD Feature Sheet

Version 3.0  
April 2011

VoltaicHD ® is a simple but effective high definition video converter, light-weight AVCHD editor and sharing utility.

VoltaicHD lets you edit, convert and share high definition movies with the greatest of ease.

**Convert AVCHD.** VoltaicHD can convert any AVCHD video on the market. We constantly test and refine our conversion process to support new cameras and variations of the AVCHD standard. VoltaicHD can also convert into any video format support by QuickTime on the Mac.

**Native AVCHD Output.** VoltaicHD can convert to AVCHD which means that zero-loss movies can be created. For this output format we do not convert the video at all, we just trim and re-package the video and audio streams to create a new AVCHD movie.

**Preview.** ShedWorx has an AVCHD Previewer which provides a live preview of AVCHD movies. AVCHD movies play immediately on any hardware with no delay.

**Edit (trim, join and add a title).** The user can edit AVCHD movies directly from VoltaicHD. The previewer allows the user to set an in and out point on each clip, join all required clips into a new movie and add a lower third title.

**Send.** VoltaicHD can send converted clips to YouTube, iPhone, iPod and AppleTV. With the Preview and Edit functions the user can be publishing AVCHD movies without pre-conversion.

**Convert Anything.** VoltaicHD can convert from a large number of other HD video formats. See the Supported Cameras page to see a full list of supported cameras.

**Easy to Use.** VoltaicHD is extremely easy to use. VoltaicHD contains a number of format detection functions which enables it to automatically detect the video's settings and optimize the conversion process.

**No camera.** VoltaicHD does not need the camera connected when converting. VoltaicHD can convert stand-alone AVCHD movies without the entire AVCHD folder structure.

**Professional Features.** VoltaicHD caters for high-end users with features such as 24p pulldown and advanced de-interlacing.

**Mac Features.** Export to any QuickTime supported video option. Third-party QuickTime Plug-ins are accessible from VoltaicHD. This includes Apple Intermediate Codec for imovie and ProRes for Final Cut. VoltaicHD is a Universal application, so will run on Intel and PowerPC Macs OSX 10.5 and 10.6 (Snow Leopard).

**PC Features.** Export to WMV, AVI and QuickTime MOV formats using the PC version of VoltaicHD. Full HD WMV exports are optimised for use in Microsoft Movie Maker.

## **Pricing**

VoltaicHD is priced at \$US 39.99 for both PC and Mac. Volume discounts are available.

VoltaicHD is available from [shedworx.com](http://shedworx.com) and the Mac version is also available on the Mac App Store.

## **System Requirements**

VoltaicHD for Mac runs on OSX 10.5 and 10.6 on both Intel and PowerPC platforms. OSX 10.6 is our preferred platform.

VoltaicHD for PC runs on the following platforms:

- Windows XP service pack 3
- Windows Vista 32 and 64 bit
- Windows 7 32 and 64 bit

There are no minimum RAM or CPU requirements for VoltaicHD, however faster CPUs give lower conversion times and more RAM is needed for larger files (>500MB)

## **More Information**

Please contact us if you require NFR keys for evaluation purposes. We are more than happy to answer any questions you might have about our products or general video and digital asset management.
